

TIS GRUPA

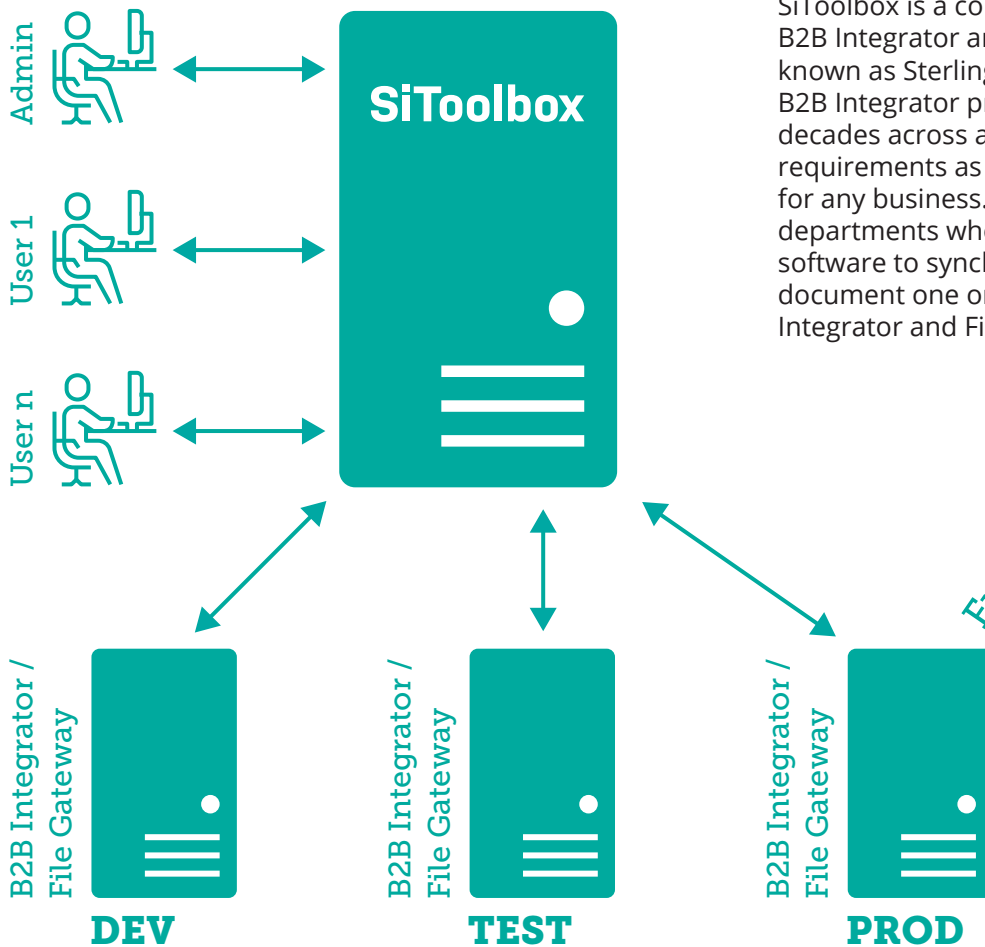

SiToolbox

For IBM® Sterling B2B Portfolio

TIS SiToolbox utility tool:

SiToolbox is a complementary software for IBM B2B Integrator and IBM File Gateway formerly known as Sterling Software. The File Gateway and B2B Integrator products have been used for decades across all industries for all B2B and MFT requirements as underlying technology concepts for any business. SiToolbox helps organisational departments who use the aforementioned software to synchronise, compare, migrate, document one or more installed instances of B2B Integrator and File Gateway.

Functionalities

- Analysis, comparison and synchronisation of business processes, maps, service instances, routing channels...
- User roles, change management and change audit
- Deploy AWS adapters
- Improved business process execution monitoring
- Creation of documentation
- Interactive reporting
- Multilanguage support

B2B and MFT

During 30 years of B2B and MFT projects in all industries TIS has gathered invaluable knowledge which was the foundation for the development of SiToolbox. Even though IBM B2B Integrator and IBM File Gateway are being used by top Fortune 500 companies the software has been lacking some features, resulting in increased manual work like audits, migrations, documentation and similar operations.

These processes, operations can be partially automated and controlled resulting in significant time saving and achieving fast ROI. Critical data flows are an extension of an organisation. The organization's success ultimately depends on the successful flow of critical information.

Handling such daily operations can be cumbersome resulting in manual work which is prone to mistakes and large time consumption. Therefore, any organisation will find SiToolbox as an invaluable partner in daily operations.

Why SiToolbox and TIS:

TIS has been providing services for 30 years using Sterling/IBM product portfolio which resulted in producing a complementary software helping IT departments with their daily operations.

SiToolbox

SiToolbox will help you to:

- Ensure safe, seamless and transparent synchronisation / migration of your IBM B2B Integrator/ IBM File Gateway resources between all environments in your organisation.
- Ensure up to date configuration of B2B Integrator / IBM File Gateway entities by comparing, synchronising and migrating entities
- Manage changes to the B2B Integrator / File Gateway instances
- Seamlessly connect B2B Integrator / File Gateway to AWS
- Reduce time spent on issue handling and administration of system
- Lower operational time consumption and give a capability to audit your systems nearly in real time
- Have more time for development processes on B2B Integrator / File Gateway systems
- Create documentation of implemented entities

Therefore, TIS can provide various services using 30 years of experience, services such as:

- **Consultancy services**
- **Health checks**
- **Architecture designs**
- **System optimisations**
- **Requirement Discovery and Definition**
- **Solution Design and Implementation**
- **Training and Best Practices Advisory**
- **Ongoing Support**
