What is SiToolbox?

SiToolbox utility tool is add-on to IBM® Sterling B2B Integrator whose purpose is thorough system entities reporting of single deployed IBM Sterling Integrator system and mutual entities comparison of two or more remote IBM Sterling Integrator systems.

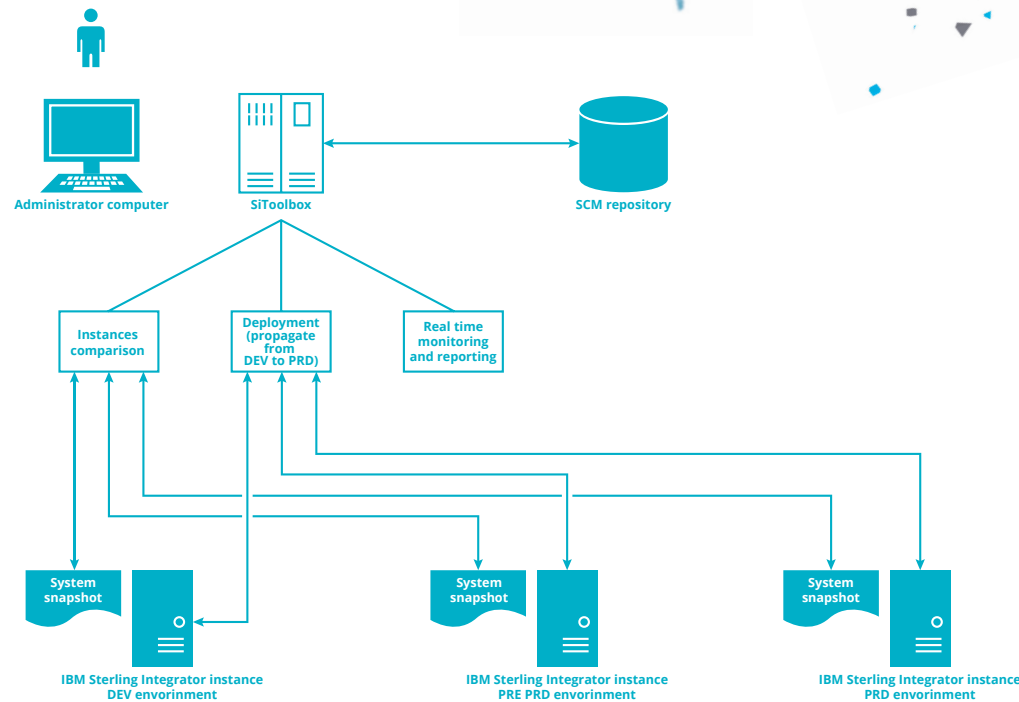

SiToolbox will help you to:

- Ensure safe, seamless and transparent migration of your IBM® Sterling B2B Integrator resources between all IBM® Sterling B2B Integrator / IBM® Sterling File Gateway environments in your organization.
- Continuous integration and automated deployment.
- Track and compare business process execution contexts from business process start to end.
- Create unique system snapshots for source versioning repositories and documentation purposes.
- Produce technical documentation through an automated process.

IBM Managed File Transfer

Your organization's success ultimately depends on the successful flow of critical information. IBM Managed File Transfer enables enterprises to increase the security, reliability and governance of the file transfers critical to their businesses.

This simplifies synchronizing systems, business communities and sharing data between people to speed the structured and unstructured processes that run your business.

For most demanding customers with large and complex B2B environments, based on IBM Sterling MFT portfolio, TIS developed SiToolbox.
